

# KNOW WHAT YOU HAVE.

## MANAGED DETECTION & RESPONSE

Closing the gap – business-driven defined monitoring, early detection and rapid response

“He who defends everything, defends nothing” is a quote by Frederick the Great about waging war but it also applies to Cyber security.

No IT Security team can monitor every application, network, system and data asset that a company has, no incident response team can follow up on every alert and security event, and no manager has the budget for every new security technology that is released.

Reliance acsn delivers an improved way of monitoring and protecting your information assets. ‘Knowing what you have before you can protect it’ is the foundation of our successful approach based on the application of relevant security measures geared towards an asset’s importance to your business. We combine both industry leading tools and human intelligence to deliver customer-specific contextual information and global intelligence on threat actors.

### HOW WE HELP YOU GET SECURITY MONITORING AND DETECTION RIGHT

We believe that integration between the critical components in Cyber Security is the only way to ensure confidence in a good information risk posture. This is what we do:

#### Know what you have

Take a thorough inventory of information assets.

#### Prioritise

It is neither efficient nor possible to protect and treat each system equally so prioritisation and risk management is the next step.

#### Optimise

Establish intelligent design that takes account of specific needs and costs.

#### Detect & Orchestrate

In operation, effective security monitoring must collect all relevant data from the various sources and must present a simple but comprehensive management view so that incident response can be carried out in an organised and validated way to provide business-driven reporting.

#### Respond, Improve, Maintain, and Grow

Implement defined and documented incident response processes that are continually updated and staff trained on frequently. During an incident, the SOC and Incident Response team become one virtual team.

Our services combine the advantages of an in-house dedicated Security Operations Centre (SOC) with the benefits of shared Managed Security Services, thereby eliminating the disadvantages of both service models:

Our named customer-dedicated analysts will build intimate knowledge of your environment, its assets, its processes, and your organisation. We will use this to build tailored security monitoring use cases, monitor your environment, analyse and report on events and support you with handling incidents

We will deliver actionable intelligence and robust reporting that can be used as feedback to influence existing and new controls, helping you to proactively manage your information security risks

Our service is delivered utilising LogRhythm's network and host analytics technology. LogRhythm are recognised by industry analysts Gartner and Bloor as "Leaders" and "Best in Class" ensuring we provide a good quality solution. The LogRhythm service can be installed on-site utilising a co-managed model or, Reliance acsn can provide a fully managed, usage-based model that allows you to grow scope and requirements without the need for any CAPEX investment

## THE BENEFITS OF OUR APPROACH

Security integrated with digitally transformed business, improved risk, future-proofed optimised investment, and better reporting:

- Helps you to understand your critical business assets
- Combines the need to protect using intelligent use-cases aligned to managing information security risk
- Reduces the cost of security monitoring by focusing on what really matters through having a designated SOC service
- Reduces the need to maintain experts on your staff, capitalising on the economy of scale by using what you need
- Thanks to good, packaged and repeatable audit and discovery, only focus on the activities that have a direct impact on improving your risk posture
- Maintains a process of iterative improvement, ensuring your platform maintains its relevance as the environment continues to evolve in both IT and threat sophistication
- Anticipates the need for services that allow for a more proactive stance - Hunting and Forensics for example

### ABOUT RELIANCE ACSN:

We are a Digital and Cybersecurity Service provider and we believe results come from a well-executed and business-integrated approach stemming from the application of our skills and expertise, combined with threat intelligence and effective risk management.

ACSN was founded in 2003. Reliance acsn was born through merger with Reliance Cyber Science in 2016.

We have a highly skilled and experienced team, with an ambitious plan underway to grow significantly in the near future.

We've built strong partnerships with over 80 customers across 5 continents, helping them to address Digital Transformation and Cybersecurity challenges.

Our staff are accredited by all the major security vendors and are able to support virtually any technology you have in place or you've been planning to procure.
