

Specialists in IT Security Management

Lead Penetration Tester – Web Specialist

Reporting to:	Penetration Testing Team Leader
Number of direct reports:	TBD
Hours of work:	37.5 hours per week, Monday to Friday 9am to 5.30pm, 1 hour for lunch
Job type:	Permanent
Location:	London with flexible working

Job purpose:

This is senior role in our penetration testing team that will provide:

- Experienced penetration testing capability to our customers
- Guidance and training to more junior members of the team to help them advance their skills.
- Ownership of the web testing capability and expanding this capability to stretch upstream in code review and Secure Development Life Cycle.

This is an exciting role that will allow you to grow your own skills, experience and ability. You will be required to bring innovation and drive to develop our capabilities in line with customer demands and where we see the marketplace progressing.

Main accountabilities:

- Delivery of pen testing across all fields of testing (e.g. web, network, mobile...)
- Experience of Vulnerability scanning tools (Qualys, Nessus), and knowledge of pen testing platforms (e.g. Backtrack/Kali, Nmap and Burpsuite).
- Expert insight of OWASP Top 10, and web application penetration testing.
- A consultative and professional approach to help build out our client relationships.
- Excellent report writing skills
- Able to communicate clearly with comfort translating the technical details into wider business context for senior stakeholders .
- Working as part of a team, but capable of being self sufficient on small engagements.
- Clear understanding of ethics, and rules of engagement/scope.

- Flexibility in approach that will allow deployment onto wider cyber security projects as customer demands require.

Specific accountabilities:

- Leadership, ownership and growth of our web and mobile focused testing capabilities.
- Develop and grow our code review and SDLC capability.

Work context:

- Strong team work ethic to help develop other team members and wider Reliance capabilities
- Client relationship building (face-to-face, by telephone or otherwise, including visits to customer sites)
- Requires attention to detail and a high level of accuracy.
- Strong ethics, clear understanding of penetration-testing rules-of-engagement, scope limits etc.

Working relationships:

- Sales
- Consultants
- Other Team members including senior penetration testers
- Executive Management

Personality profile:

- Proactive, "can do" attitude.
- Must be able to take on responsibility and leadership for web app capability
- Must be self-sufficient, but also able to work in a team.
- Natural coaching and teaching style
- Problem solving skills.
- Excellent communications skills, extending to clear report writing skills.
- Ethical.
- Professional.

Potential career paths:

Reliance acsn is an ambitious company where we are building an outstanding team that will allow us to grow. This role is a pivotal role in expanding our capabilities and in turn as we progress then the opportunity for career growth and wider responsibility is very feasible.
