

# Compliance Support

## Demonstrate security capability with ISO 27001 and NIST compliance

Achieving externally audited accredited certification to ISO 27001 or NIST requirements is likely to promote a higher level of confidence in your information security standards among your clients, partners and supply chain. It is also a prerequisite for securing certain contracts, particularly those in the public sector and with governmental agencies.

Certification to ISO 27001 or NIST standards demonstrates that your organisation is following information security best practices. It delivers an independent, expert assessment (in the case of ISO 27001) or a rigorous self-certification mechanism (in the case of NIST) to confirm that the confidential and sensitive information you hold and process is adequately protected from breach and cyber attack.

**Reliance acsn's Compliance Support helps your organisation attain ISO 27001 and NIST certifications, demonstrating to your clients and supply chain that you're serious about your (and their) information security.**

We produce a thorough compliance gap analysis, comprehensively identify threats that put your compliance at risk, and propose clear, business-aligned next steps.

---

## What Compliance Support delivers

Reliance acsn's Compliance Support delivers the full ISO 27001 and NIST methodologies for information security compliance across the board, not just in your IT systems but in your surroundings and processes too.

We work with you, on-site, to understand what compliance really means for your specific business, its operating model, and its risks.

### **Effort is focused where it's most effective**

We not only work with you to identify potential threats, we test and validate their outcomes to ensure we concentrate compliance effort where the risk is highest.

### **Measure yourself against your competitors**

We produce an overall security score for your organisation, relative to both size and sector, to show how you compare to your peers and competitors.

### **Not just cyber compliance**

We cover asset management, physical and environmental security, communications and operations management, and more.

## How our approach benefits you

Our approach to Compliance Support is tailored to your organisation, its assets, and the risks to compliance that your specific systems, networks and operating model could present.

Our ISO 27001 and NIST Compliance Support is a focused and specialist service, but can be combined with other services to deliver wider compliance activities that may further benefit your organisation, e.g. in relation to GDPR, ISO 22301, PCI DSS, and more.

### **1** We tailor our delivery to your organisation

Based on initial scoping and ongoing consultation with key stakeholders.

### **2** We continually update our compliance

By participation in and membership of standards bodies and industry forums.

### **3** We support your IT team's productivity

Enabling them to push ahead with business-critical infrastructure projects rather than delaying them over compliance concerns.

### **4** We're with you for the long term

We're here when you need us to advise on compliance updates – and to help your organisation through them so that it stays compliant.

### **5** We keep your people informed

Producing timely and role-appropriate communication that explains our work, its necessity, its outputs, and its value to the organisation.

### **6** We deliver clear reporting & next steps

We help you through them, in jargon-free language from humans with security expertise and an understanding of your business priorities.

---

## About Reliance acsn

**Across five continents, enterprise and government clients depend on Reliance acsn to defend them against cyber threats like nobody else can.**

Our managed security and consultancy services support organisations throughout the challenges of assurance, awareness, detection, response and prevention, 24 x 7, and focus on business risk – securing not just assets and data, but revenues, too.

- Reliance acsn's history goes back to 2003, with the founding of global cyber security specialist ACSN.
- In 2016, a merger created Reliance acsn in London, UK, to deliver real-time Managed Detection and Response (MDR)
- We've helped scores of the world's top brands plan, deploy and manage robust security solutions, in banking, telecoms, retail, government and insurance.
- Our people are accredited across all the major standards in IT security – including PCI, ISO27001, G-Cloud, CISSP, CREST, and many more – and accredited to support virtually any technology you have in place or are planning to procure.
